We don't give guarantee for our extension worked on third party magento extensions or themes and custom work on default themes or extension.

Introduction:

It's hard to keep track of the bots and spammers who are attacking websites, but the good news is that we have a solution!

We created Restrict Fake User Registration to help you protect your website from fake accounts, and we're excited to share it with you.

When any bot or spammer tries to create a new account on your website, this extension will stop them in their tracks. It does this by limiting the length of customers' first names and last names (we've found that bots often create accounts using long first names and short last names). You can also apply a limit for character length for the customer's first name and last name so that bots can't create new accounts with fake names too long.

Backend and Frontend Features:

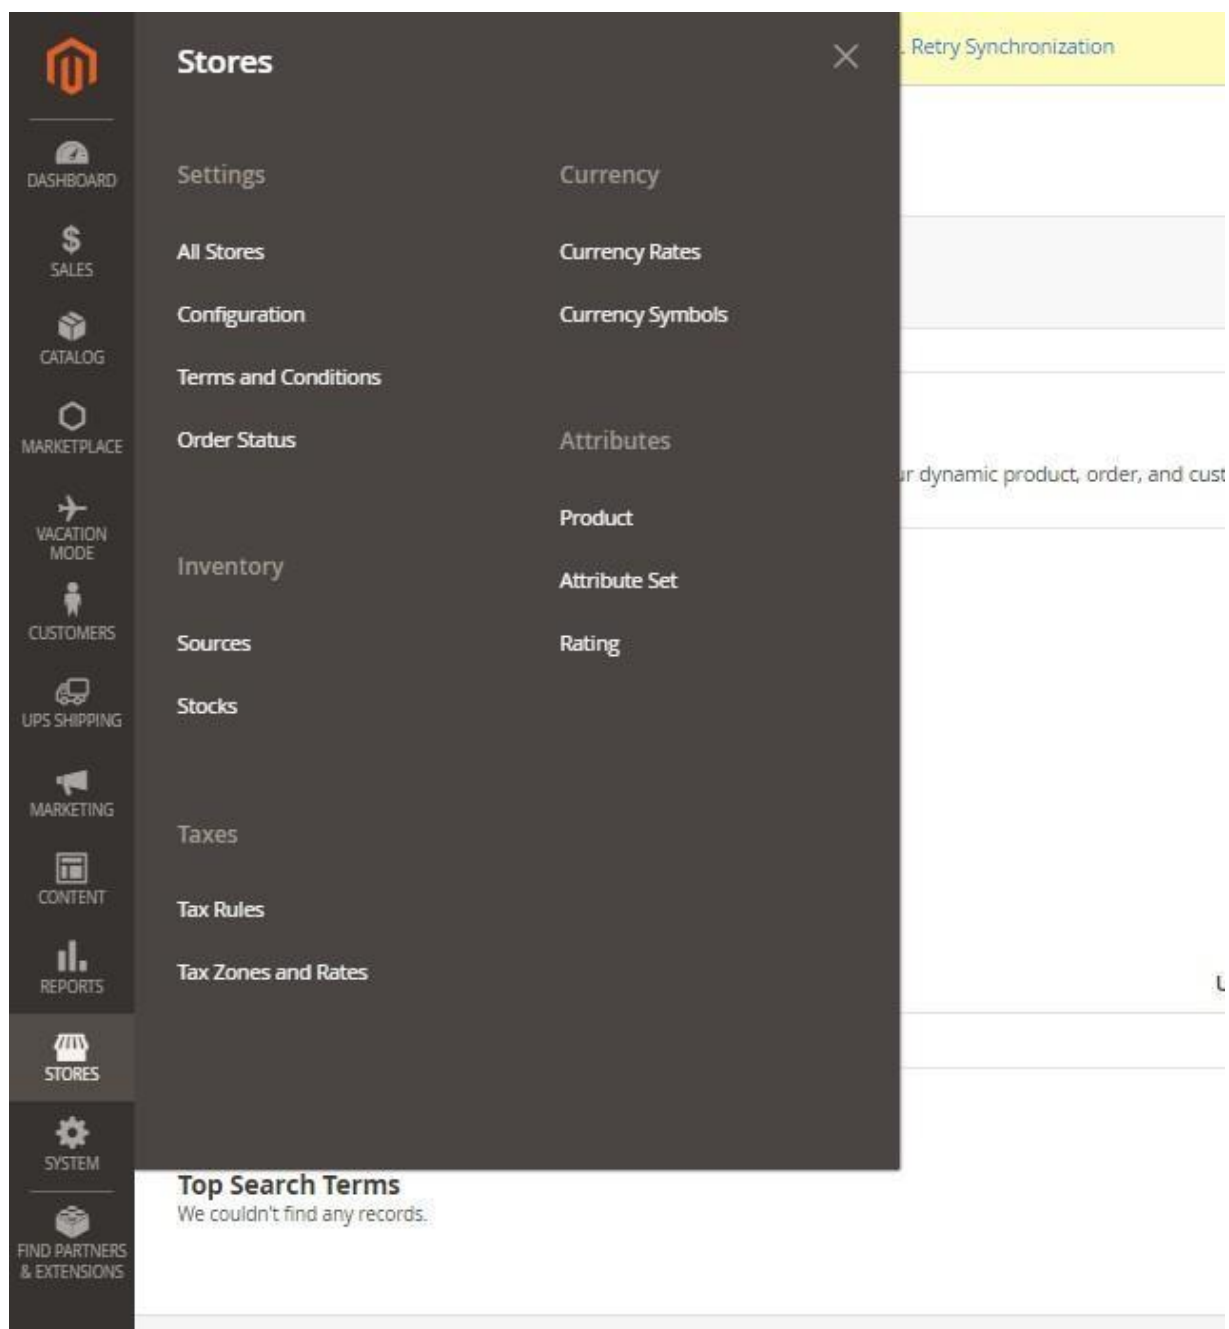

- ✓ Preview restricts the fake user in the admin panel
- ✓ Magento admin in the backend can enable or disable the extension.
- ✓ The admin setting first-name and last-name character limits in the admin panel.
- ✓ The admin set lists and configures email domains to restrict fake registration spam.

Admins can easily configure the Restrict Fake User Registration module on their store.

Configuration:

Step 1:

Login to the Admin Magento. Navigate to **Stores > Configuration .**

click on **ESTS** ,section.

Configuration

Scope: Default Config ▼

 ESTS
